Complete Installations

Metal finishing processes for nickel-, chromium- and zinc-plating, anodizing etc

Mister Stainless supplies separate tanks and tubes as well as complete plants for metal finishing and waste water treatment.
Complete Installations

Plant for continuous or batchwise waste water treatment in an industrial environment

The complete plant consists of a number of plastic tanks, electro-plating baths, conveying equipment, ventilation equipment and it includes all automatic control and dosing systems, which are required to ensure that the process runs at the highest possible quality level.
Mister Stainless is also supplier of separate system components and various accessories

- Plastic tanks and tank systems
- ion exchangers
- membrane filters
- water filters
- filter presses
- band filters
- filter materials
- automatic control and dosing systems
- pH, redox and conductivity meters
- chemical pumps
- tubes and valves
